- Outlook 2010 software for PC and Mac
- Support for mobile devices
- Website Hosting
- Shared web hosting space and tools

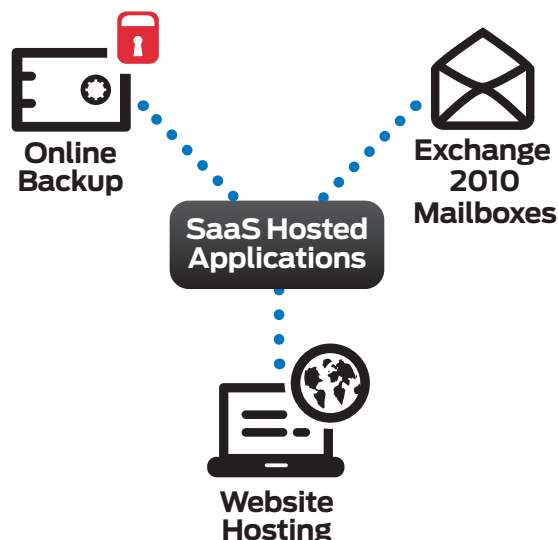

# SaaS: Hosted Applications

The following hosted applications, provided by Rise, allow you to offer additional services to your customers.

**Online Backup** ensures that important PC, laptop or server data is transferred, stored and recovered quickly and securely.

**Exchange Mailboxes** allow seamless access to company mail, contacts and calendar information, providing flexibility and collaboration for office-based, remote and mobile users.

**Website Hosting** provides a platform upon which you can build and run company websites.

## Online Backup

Online backup provides protection for all your important data and files. This simple, fast and reliable service can be configured to provide an off-site, encrypted and secure backup, ensuring your data can be recovered quickly should the worst happen.

This service is perfect for businesses that need to back up data from employees' computers or business servers. This simple-to-use software client can be installed on an unlimited number of machines and connected to any storage areas that have been defined. Individual files and folders or entire machines can be protected.

The backup can be scheduled to run at regular periods at a time convenient to the business. All data is encrypted on the local machine and then transmitted and stored in an encrypted format. Data can be restored to any local machine with the correct credentials.

The following storage quotas are available:

- 10, 25, 50, 100, 250, 500, 750 and 1,000GB

Multiple storage areas can be created and different backup scenarios can be assigned to each. For example, you may set up a 50GB area for the backup of users' email archives and a separate 250GB area for the backup of a critical server.

## Exchange 2010 Mailboxes

Professional Exchange mailboxes provide business-class email and collaboration tools without the management overhead of running your own dedicated Exchange server.

This solution is perfect for small to medium-sized businesses that need secure and reliable email. Mailboxes can be added and removed from the account as required, and a downloadable Outlook 2010 client enables you to work with your mail, contacts and calendar even when not connected to the internet.

Professional mailboxes are built on the MS Exchange 2010 platform and provide:

- 5GB mailbox
- Latest Outlook (2010) software for PC and Mac
- Access to email through a browser with Outlook 2010 Web App
- Calendar, task list and folder sharing
- Email and calendar synchronization on your mobile with Exchange ActiveSync
- Virus scanning and spam filtering
- Roaming SMTP - use our outgoing mail server with any broadband provider
- Use of your own domain name regardless of where it's registered.

## Website Hosting

Web hosting from Rise provides a robust, reliable platform on which to run a company website. Choose a suitable amount of web space and features before uploading or building your site using the web tools included in the package. Servers are configured to support the latest development languages and frameworks, including ASP.NET, ASP, PHP, Perl and Python.
